

ACCURO WEB SERVICES

Coding and Compliance Content and Intelligence for Business-to-Business Integration

Application-to-application communication has been a challenge in the past, but increasingly it is being delivered via the World Wide Web. And, improvements in application interoperability and extensibility have been realized with the use of Extensible Markup Language (XML).

Now, Accuro Web Services via XML provides a standard means of interoperating between different software applications running on a variety of platforms and/or frameworks. This means businesses can access comprehensive revenue intelligence and coding and compliance data for application integration.

“Integrated CodeCheck is a critical piece of our value proposition, because the information it provides speaks directly to our clean claim rate.”

KEY BENEFITS

With Accuro Web Services via XML, you can:

- Access comprehensive coding and compliance content
- Achieve easy integration between applications
- Depend on Web-based delivery

Accuro
A MedAssets[®] Company

FEATURES

INTEGRATED MEDICAL NECESSITY CHECKER

Integrated Medical Necessity Checker identifies possible medical necessity issues prior to the provision of services, substantially reducing accounts receivable write-offs. With Integrated Medical Necessity Checker, you can:

- Review Medicare Part B planned patient care, as defined on institutional (UB-92) or professional (CMS-1500) claims
- Gain clarity on situations not clearly defined by LCDs and NCDs with status codes and narrative guidance provided by credentialed professionals
- Create user-defined alerts and medical necessity edits

INTEGRATED CODECHECK

Integrated CodeCheck does it all: supports Part A and Part B, verifies modifier usage, checks for CCI bundling edits, determines code validity, displays RVU, validates pass-through items and verifies medical necessity. Other features include the ability to:

- Integrate the charge entry component with our code validation capabilities, reducing denials and re-work
- Generate real-time alerts for charge transaction, and identify transactions that are at odds with current Medicare coverage guidelines
- Create user-defined alerts and medical necessity edits

INTEGRATED KNOWLEDGEBASE

You now have a rich resource for information gathering. Integrated KnowledgeBase accesses libraries of key documents published by CMS and Medicare contractors and also helps you:

- Search documents using keywords or codes
- Retrieve summary detail and actual document text
